

**NAMIG/C2C
PROFESSIONAL DEVELOPMENT OPPORTUNITY
TERM THREE 2010**

Looking at C2C from an Undergraduate Perspective

The session will showcase two groups of undergraduates who are working in different ways to not only support the current C2C program but are also identifying some great potential for the future.

The first team has assumed a different mentoring role by mentoring teachers in CAD but in the process has commenced the development of some introductory modeling and construction that could provide Yr.9 &10 projects that would prepare students for UAV and maybe some research Project possibilities.

The second team is final year Engineering students who are constructing a racing car for a national competition. Their explanation of project management and delegation of duties is a great example of what underlies good projects. This project also has the capacity for us to develop some lead-in projects in schools: with these guys as mentors.

A Great Opportunity for grasping Project Based Learning and C2C processes, regardless of whether it is for these or other project types.

Something that might link with other things already happening in your school (F-1 racers) or to other teachers who are teaching STEM subjects at various levels.

WHEN: Wednesday 18th August
1.00 – 3.30PM
WHERE: Uni SA Mawson lakes
Room **J1-01**

*Lunch and ½ Day TRT supplied

**Post this on your staff notice board and Spread the word about this great opportunity
